

Always On – Virtual Desktop

Free your credit union from on-site corporate data storage and make mobility a reality! Alloya's Always On – Virtual Desktop improves staff efficiency and availability by offering browser-based access to up-to-date systems and software. By linking the data storage and processing power of employee workstations to a virtualized environment, you dramatically extend the lifespan of desktop and laptop computers while reducing capitalized costs. And if the credit union's workstation fails, simply go to another device with a browser and login.

Alloya's Always On – Virtual Desktop enables credit unions to:

- Avoid the stress of PC break/fix and desk-side support
- Reduce capital expenses and operational costs
- Enhance data security features from a data center environment that is annually audited by SSAE16 and PCI DSS, easing the burden of compliance requirements
- Stay abreast of the changing landscape that can be challenging for credit unions with limited IT resources and staff
- Receive ongoing support from Alloya's IT experts who maintain the inherent knowledge, certifications and skill sets
- Greatly reduce the risk of data leakage caused by the loss or theft of a workstation or employee device
- Securely access the virtual environment from any remote location

Enhance Effectiveness

Improve staff efficiency and availability by offering browser-based access to up-to-date systems and software.

Find Peace of Mind

Greatly reduce the risk of data leakage caused by the loss or theft of a workstation or employee device.

Save Money

Reduce capital expenses and operational costs by leveraging a managed virtual solution.
